

## MANAGED MICROSOFT® SQL SERVER

The Microsoft SQL Server (MS-SQL) database is a comprehensive and integrated data management and analysis software application that enables the reliable management of mission-critical information. By giving businesses greater insight into their business data, MS-SQL 2005 allows them to achieve faster results and achieve significant competitive advantage. But managing an SQL implementation can be time-consuming and costly. To relieve businesses of the day-to-day burden of administrating their SQL server environment and infrastructure, SAVVIS offers comprehensive and expertly managed MS-SQL database services to businesses for a predictable fee that significantly lowers total cost of ownership (TCO) of the application.

As a recognized leader in the delivery of mission-critical applications, SAVVIS is uniquely positioned to meet the needs of businesses that require secure, reliable access to their database applications. SAVVIS Managed MS-SQL services are managed by a team of Microsoft certified SAVVIS engineers who are experts in deploying and managing MS-SQL databases hosted on an infrastructure that can scale easily to meet customer demands. Our key differentiator? Experience. SAVVIS delivers fully managed server, operating systems, and application solutions to more than 5,000 enterprise customers. These solutions are hosted within 29 state-of-the-art data center facilities connected to SAVVIS' Application Transport Network (ATN), an MPLS network designed to optimize application performance. This robust, global infrastructure is complemented by customer support teams that monitor each MS-SQL database and proactively notify customers of performance-impacting events.

### Management made simple

SAVVIS understands that businesses need real-time visibility into their MS-SQL environment to ensure optimized database performance, monitor usage trends for capacity planning, and troubleshoot any issues that should arise. SAVVIS has built SAVVISStation, a powerful Web-enabled tool that delivers this visibility to businesses so they can manage their MS-SQL database environments easily and effectively.

SAVVISStation provides customers with:

- Detailed application views of MS-SQL
- Segmented data file space
- CPU/IO within the database
- Cache hits
- Transaction trending rates
- Top five transactions

### About SAVVIS

SAVVIS, Inc. (NASDAQ:SVVS) is a leader in providing and managing global IT infrastructure and end-to-end managed services that enable quick and strategic response to the demands and technology needs of business and government. SAVVIS combines virtualization technology, a global network and data centers with automated management and provisioning systems to provide a full suite of hosting, utility compute, network, security and professional services. These services give customers an ideal balance of support and control that enables them to focus their resources on their core business while SAVVIS ensures the quality of their IT infrastructure.
