

## MANAGED MICROSOFT® IIS

In a business environment where downtime or poor site performance can cost millions of dollars, delivering HTTP content to Web users and customers is a critical component of operations. Choosing the right server application and hosting provider is paramount to ensuring that availability and site performance are not compromised. With this in mind, Savvis has designed its Managed Microsoft Internet Information Services (MS IIS) to be a fully managed application within the Savvis hosting portfolio.

Savvis' MS-IIS Web server application offers a reliable, high performance, and secure vehicle for delivering HTTP content to end users. It is hosted on the Savvis Intelligent Hosting<sup>SM</sup> Virtual Intelligent Hosting, and Utility Compute platforms within a Savvis Data Center and delivered across the MPLS enabled Savvis Application Transport Network (ATN). The significance of this is *availability*. Savvis has built redundancy into its data centers and network infrastructure to ensure customer applications are highly available. And because it's managed by Savvis, businesses are free from administering time-intensive tasks like patch deployment and system monitoring. What's more, Savvis has the breadth of expertise to accommodate any number of IIS deployments, from a simple, single instance to broader, complex solutions that require Website creation, ongoing site management and custom monitoring – all of which are available through Savvis Professional Services.

### Replication

For customers deploying multiple IIS nodes, Savvis can deploy replication technology to these environments as an add-on service. Replication facilitates copying content and configuration settings from one IIS node to another, so that both servers are able to offer identical resources to users. Savvis provides replication services in two configurations, local and remote. Local replication allows customers to deliver content on multiple nodes within the same Savvis data center while remote replication provides the same functionality in solution architectures that involve multiple, geographically diverse Savvis data centers.

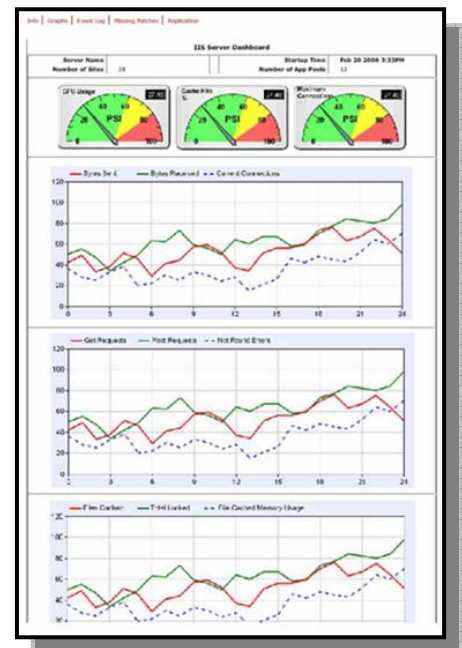

### Microsoft IIS and SAVVISStation

Savvis understands that businesses need real-time visibility into their MS-IIS environment to ensure optimized application performance, monitor usage trends for capacity planning, and troubleshoot any issues that should arise. Savvis has built a powerful Web-enabled tool that delivers this visibility in real-time to businesses so that they can manage their MS-IIS database environment and deliver HTTP content more easily and cost effectively.

### About Savvis

Savvis, Inc. (NASDAQ:SVVS) is a leader in providing and managing global IT infrastructure and end-to-end managed services that enable quick and strategic response to the demands and technology needs of business and government. Savvis combines virtualization technology, a global network and data centers with automated management and provisioning systems to provide a full suite of hosting, utility compute, network, security and professional services.

These services give customers an ideal balance of support and control that enables them to focus their resources on their core business while Savvis ensures the quality of their IT infrastructure.

### SAVVIS Delivers

- Software installation & configuration
- 24x7 monitoring and problem resolution (18 monitors)
- Published performance statistics (21 metrics)
- Software updates
- Local or remote content replication\*

### Included Feature Enhancements\*\*

- ASP.Net 1.1
- ASP.Net 2.0
- ASP.Net 3.0
- ASP.Net 3.5
- IIS FTP Service
- IIS NNTP Service
- IIS SMTP Service
- IIS WWW Service
- IIS Administrative Service
