 - Administration Monitor
 - Upgrade Advisor
 - Performance Advisor
- Local and remote database replication
- Change Management
 - Modify/Add Users
 - Disconnect user session
 - Create additional databases

Savvis' Certified MySQL Administrators are highly skilled specialists in deploying and managing managed applications, such as MySQL databases, that can scale easily to meet customer demands. You can feel secure that Savvis professionals are fully trained and certified to provide the services and capabilities you require 24/7/365.

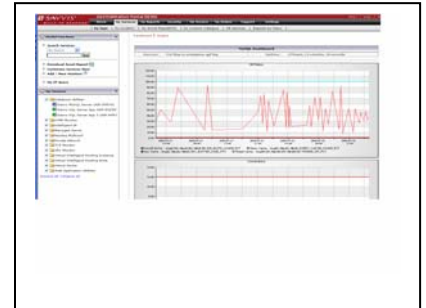

These solutions are hosted within Savvis' state-of-the-art data center facilities connected to Savvis' Application Transport Network (ATN), an MPLS network designed to optimize application performance. This robust, global infrastructure is complemented by customer support teams that monitor each MySQL database and proactively notify customers of performance-impacting events.

Management made simple

Savvis understands that you need real-time visibility into your MySQL environment to ensure optimized database performance, monitor usage trends for capacity planning, and troubleshoot any issues that arise. To deliver this visibility, Savvis has built SAVVISStation, a powerful Web-enabled tool that allows you to manage your MySQL database environments easily and effectively.

SAVVISStation provides you with:

- A detailed dashboard with graphics and tables to view database activities, table locks, cache hits, and connections, among other events
- The ability to generate custom performance charts on 146 metrics
- The ability to create and view problem tickets
- One portal to view all Savvis services

About Savvis

Savvis, Inc. (NASDAQ:SVVS) is a leader in providing and managing global IT infrastructure and end-to-end managed services that enable quick and strategic response to the demands and technology needs of business and government. Savvis combines virtualization technology, a global network and data centers with automated management and provisioning systems to provide a full suite of hosting, utility compute, network, security and professional services. These services give customers an ideal balance of support and control that enables them to focus their resources on their core business while Savvis ensures the quality of their IT infrastructure.
