Your SaaS infrastructure solution.

The challenge of SaaS

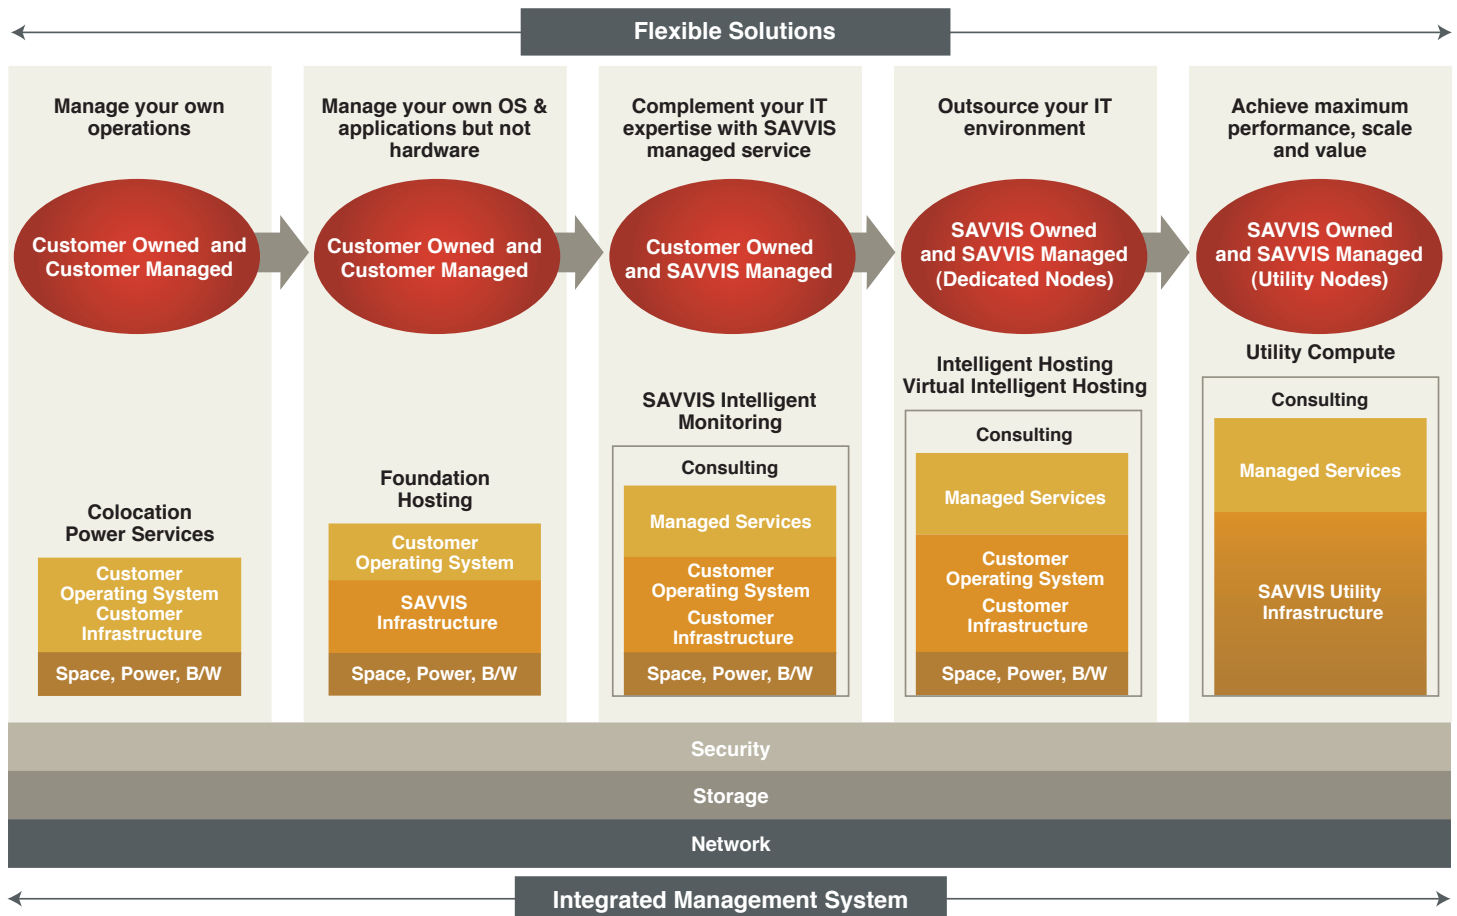

The Internet has enabled a new way of delivering software, Software-as-a-Service (SaaS). Whether you are a CEO, an IT manager or an ISV, you are challenged with delivering, migrating and maintaining applications in this new model. You need to consider availability, scalability, reliability and global reach for your applications.

Choosing an infrastructure solution that meets both the existing and future needs of your company is critical. You need a cost effective approach to your infrastructure. You need infrastructure that is scalable, flexible and responsive.

SAVVIS Flexible SaaS Infrastructure Solutions

Whether you want to keep your servers close to home or outsource them altogether, SAVVIS has a wide range of solutions from colocation to fully managed services that can meet your business needs. Our “pay-as-you-go, grow-as-you-go” application infrastructure can be as responsive to your needs as you are to your customers. Our flexible solutions model allows you to choose the infrastructure service that is just right for your business needs.

As your application expands, your infrastructure will need to scale and grow. With SAVVIS SaaS infrastructure services, your company gains access to an application delivery platform that preserves capital and scales to support your growth. You can stay focused on delivering top-notch applications while SAVVIS focuses on the quality of your infrastructure.

Trust SAVVIS to deliver your network-enabled IT SaaS infrastructure as a secure, managed service.

Built to respond to your rapidly changing market requirements and business challenges.

SAVVIS will enable you to focus on your application while making sure that it runs to perfection by doing what we do best — manage SaaS infrastructure.

A greater global footprint

Running your SaaS business on a global scale presents a variety of challenges including local regulations, business practices and staffing — just to name a few. Thanks to our data centers across the globe, SAVVIS offers a complete range of network, server and application hosting, storage and backup, and security services — helping you to mitigate the risk and capital expenditures that arise when your business grows into global markets. Best of all, your overseas IT infrastructure will operate with similar high levels of performance, security, and accessibility as it does at your home location.

Keeping your applications running

Your IT infrastructure needs to be ready for a disruptive event, whether a hurricane or a power outage caused by a backhoe. SAVVIS has hardened data center facilities and a resilient network infrastructure to help prevent the disruption of your application services. SAVVIS' infrastructure is highly reliable and highly available to help you to enhance your application performance and availability.

Lower cost of ownership

Instead of having to purchase, install and manage servers, storage and other IT infrastructure, you can leverage SAVVIS' SaaS infrastructure. We've made significant investments in the development of world-class infrastructure and management systems that would not be cost effective to build on your own.

Our experience and economies of scale provide an extremely cost-effective and responsive applications platform. By utilizing our infrastructure and team of IT experts you can reduce your infrastructure staff and concentrate on your client services and application development.

Relax. Your infrastructure is ready.

As a leading expert in managed services, SAVVIS can help you successfully deploy your SaaS applications. We'll assist you in getting your SaaS business off the ground and support you as you go. SAVVIS will allow you to focus on your application development while we make sure that they run to perfection by doing what we do best — manage SaaS infrastructure. And our professional services team has the expertise in existing and emerging technologies and is the ideal source for assessing, developing, implementing and managing your SaaS solution.

Call today and see how our SaaS infrastructure and team can support your SaaS applications.

SAVVIS Managed IT Services

SAVVIS offers a comprehensive suite of services tailored to your requirements for speed, security and access. Our pay-as-you-go model gives you easy access to services that quickly enhance your time to market. All SAVVIS services come with 24x365 monitoring and support.

Network

The SAVVIS Application Transport Network (ATN) delivers a robust, reliable, and application aware transport network that allows customers to select Quality of Service (QoS) levels to best suit their needs. Using the Service Oriented Network Architecture (SONA) model, the ATN ties together new Ethernet access methods, metropolitan DWDM rings, and our new Multi Protocol Label Switching (MPLS) network.

Private Network Services

- **Application Transport Network (ATN)**
 - > Private
 - > Private + Internet
 - > Virtual Link
- **Intelligent IP**
 - > Private Network
 - > Private Network + Internet
 - > Private Exchange
 - > COIN
- **Private Line**
 - > EVPL
 - > Bandwidth Connect

Public Internet Services

- **Application Transport Service Public**
 - > Managed
 - > Unmanaged
 - > With Firewall

Hosting

SAVVIS delivers cost savings and scalability with its suite of enterprise-class, managed hosting utility computing and storage services. SAVVIS solutions are based on a unique, flexible solutions model that's designed to meet your specific hosting requirements — featuring everything from colocation to utility and virtualized computing options. And if you prefer to retain control of your OS and applications — our Foundation Hosting solution offloads typical infrastructure management burdens like hardware procurement, racking and stacking, space and power management as well as onsite support.

Managed Compute Services

- **Dedicated**
 - > Foundation Hosting
 - > Intelligent Hosting
 - > Virtual Intelligent Hosting
- **Utility**
 - > Utility Compute

Managed Applications

- **Managed Messaging and Collaboration**
 - > Hosted Microsoft Exchange
- **Managed Database Applications**
 - > Managed Oracle
 - > Managed DB2
 - > Managed Microsoft SQL
 - > Managed My SQL
- **Managed Web Applications**
 - > Apache
 - > IIS
 - > Managed Sun Java System Web Server

Storage, Backup and Vaulting Services

- **Utility Storage**
- **Utility Backup**
- **Utility Vaulting**
- **Backup Care**

Colocation

Hosting Area Network Service

- **Managed Dedicated Load Balancing and SSL Acceleration Services**
- **Virtual Services Load Balancing and SSL Acceleration**
- **Managed Utility Load Balancing Service**
- **Managed Utility SSL Acceleration Service**

SAVVIS Intelligent Monitoring

Security

SAVVIS' Security Services benefit your company by providing flexible and scalable managed security offerings that do not require hardware or software to be installed or managed at your premises. The SAVVIS Security Utility leverages "in the cloud" security components, such as in-network firewalling, network-based DDoS mitigation and worm attack mitigation for Wide Area Networks (WANs), as well as virtualized security components, such as hosted firewalls and intrusion detection systems. Our centrally managed Security Utility Services provide fast technology refresh as new IT threats emerge and security solutions evolve.

Firewall

- **Network-Based Firewall**
- **Virtual Services Firewall**
- **Virtual Firewall Enhanced**
- **Integrated Firewall w/NIDS**

Intrusion Detection

- **Network Intrusion Detection Services**
- **Host-Based Intrusion Detection**

Network-Based DDoS Mitigation

Cloud-Based E-mail and Web Protection

Content Integrity Monitoring

Incident Response

Security Architecture Design

Security Account Manager

Threat Management

Log Management

Professional Services

The SAVVIS Professional Services organization is focused on helping customers implement customized IT solutions. Our expertise in existing and emerging technologies is the ideal resource for assessing, designing, developing, implementing, and managing your IT infrastructure. Whether your goal is to improve existing facilities/systems, relocate your data center, or help you to secure your critical applications our knowledge has placed SAVVIS as one of the leading IT consulting services in the market.
